- Both (Galy, 1973) and (McCormack, 2019) state that the metallic atom sites are disordered, that is, for the prototype each metallic site has the average composition Nb<sub>0.25</sub>Zr<sub>0.75</sub>. We place the niobium atoms on the (2a) and (2b) sites, and the zirconium on the (4c) sites so that the different symmetries are displayed.
- (McCormack, 2019) notes that the metallic composition of these compounds can deviate from the stoichiometry shown here.
