- This structure is the magnesium end-point of olivine,  $(\text{Mg},\text{Fe})_2\text{SiO}_4$ .
- We use the structural data taken by (Hazen, 1976) at 23°C.
- For olivine structures where the (2a) and (2c) sites have different species, see the monticellite structure page.

- (Hazen, 1976) reports the structure in the *Pbnm* setting of space group #62. We have transformed this into the standard *Pnma* setting.
