- (Samson, 1968) finds that the stoichiometry of this system is closer to $\text{Mg}_{22}\text{Al}_{31}$ than $\text{Mg}_{23}\text{Al}_{30}$, so there must be some substitutional disorder in this structure.
- We have shifted the origin so that the first magnesium atom is at (1a) (0 0 0) instead of (1b) (0 0 1/2).
- Hexagonal settings of this structure can be obtained with the option `--hex`.
