Prototype	Cd ₃₇ Ce ₆
AFLOW prototype label	A41B6_cP188_201_b2efg5h_h-001
ICSD	54599
Pearson symbol	cP188
Space group number	201
Space group symbol	$Pn\bar{3}$
AFLOW prototype command	<pre>afLOW --proto=A41B6_cP188_201_b2efg5h_h-001 --params=a, x2, x3, x4, x5, x6, y6, z6, x7, y7, z7, x8, y8, z8, x9, y9, z9, x10, y10, z10, x11, y11, z11</pre>

- The compound now known as Ce₆Cd₃₇ was originally thought to have the YCd₆ structure, but (Armbrüster, 2000) found that it actually has the structure shown here.

- All of the sites are fully occupied except the one labeled Cd-X, where 2/3 of the sites are vacant, giving the correct stoichiometry. We use the data taken at 298K.
- (Armbrüster, 2000) give the structure of $\text{Ce}_6\text{Cd}_{37}$ in setting 1 of space group $Pn\bar{3} \#201$. We used FINDSYM to change this to the standard setting 2.
- (Armbrüster, 2000) also present a slightly different version of the YCd_6 structure than that presented in the prototype paper, (Larson, 1972).
- We used FINDSYM to transform this to the standard second setting, which places a cerium atom and the inversion site at the origin.

Simple Cubic primitive vectors

$$\begin{aligned}\mathbf{a}_1 &= a \hat{\mathbf{x}} \\ \mathbf{a}_2 &= a \hat{\mathbf{y}} \\ \mathbf{a}_3 &= a \hat{\mathbf{z}}\end{aligned}$$
