AFLOW prototype label	A4B6C_hP11_143_ad_2d_b-001
ICSD	182778
Pearson symbol	hP11
Space group number	143
Space group symbol	$P3$
AFLOW prototype command	`aflow --proto=A4B6C_hP11_143_ad_2d_b-001 --params=`$a, c/a, z_1, z_2, x_3, y_3, z_3, x_4, y_4, z_4, x_5, y_5, z_5$

Other compounds with this structure
$LuRh_6P_4$, $YbRh_6P_4$

- (Pfannenschmidt, 2011) place this structure in space group $P3$ #143, but they find the z coordinates of the atoms on the (3d) site all close to 0 or 1/2. As a result, the default tolerance of AFLOW places this structure in space group $P\bar{6}m2$ #187. It is likely that first-principles calculations will converge to the higher-symmetry space group.
- The reported experimental structure may be recovered using
- aflow --proto=A4B6C_hP11_143_ad_2d_b:P:Rh:Sc --params=a,c/a,z_1,z_2,x_3,y_3,z_3,x_4,y_4,z_4,x_5,y_5,z_5 --tolerance=0.001.
