- This is the ground state structure of V_3O_5 . In the range 423-433K it transforms into oxyvanite, which is metastable at room temperature (Armbruster, 2009). V_3O_5 can also be found in the metastable form of anosovite, which has the Fe_2TiO_5 ($E4_1$) structure (Weber, 2012).
- (Åsbrink, 1980) places the first two types of vanadium atoms on the (2c) and (2d) Wyckoff positions of space group $P2/c$ #13. We shifted the origin so that these atoms are on the (2a) and (2b) sites.
