- Compounds of the form RESiO_5 (RE = Rare Earth and related elements) crystallize in one of two forms (Wang, 2001 and Tian, 2016):
 - X1, space group $P2_1/c$ #14, for rare earths between lanthanum and gadolinium, and X2, this structure, for the later rare earths. Dysprosium, yttrium and ytterbium compounds exist in both structures.
 - This is the high temperature phase of Y_2SiO_5 . Below 1190°C it transforms into the X1 phase.
 - The ICSD entry is from (Michel, 1967).
