- This is a body-centered cubic structure with vacancies on the octahedral sites adjacent to the oxygen atoms.
- The (2a) site is often only partially occupied, *e.g.*, Ca₆Ag₁₆N was originally thought to be Ag₈Ca₃ (Calvert, 1964), but there is some nitrogen present on the (2a) site. (Villars, 2004)

Body-centered Cubic primitive vectors

$$\begin{aligned}\mathbf{a}_1 &= -\frac{1}{2}a\hat{\mathbf{x}} + \frac{1}{2}a\hat{\mathbf{y}} + \frac{1}{2}a\hat{\mathbf{z}} \\ \mathbf{a}_2 &= \frac{1}{2}a\hat{\mathbf{x}} - \frac{1}{2}a\hat{\mathbf{y}} + \frac{1}{2}a\hat{\mathbf{z}} \\ \mathbf{a}_3 &= \frac{1}{2}a\hat{\mathbf{x}} + \frac{1}{2}a\hat{\mathbf{y}} - \frac{1}{2}a\hat{\mathbf{z}}\end{aligned}$$
