- This is the ground state structure of the double perovskite Sr₂MnTeO₆. Above 250°C it transforms into the Sr₂NiTeO₆ structure. Above 550°C it transforms into the Sr₂NiWO₆ structure, and above 675°C it transforms into the cubic perovskite E₂1 structure. (Ortega-San Martin, 2004).
- (Ortega-San Martin, 2004) give the structure in the $P2_1/n$ setting of space group #14. We used findsym to transform this to the standard $P2_1/c$ setting, which uses a different set of basis vectors.

Simple Monoclinic primitive vectors
