## Other compounds with this structure

AgSb(OH)<sub>6</sub>

- The atomic positions were originally determined using setting 1 of space group *P*4<sub>2</sub>/*n* #86. We used FINDSYM to change the origin to setting 2.

- The sites labeled “O” are actually OH radicals.
- Although the replacement of fluorine by OH does not affect the shape of the  $\text{Sb}(\text{F},\text{OH})_6$  ions, it has a profound effect on the structure, as can be seen by looking at  $\text{NaSbF}_6$  and  $\text{NaSbF}_4(\text{OH})_2$  ( $J1_{12}$ ).
